

In the Specification

Please amend the specification to replace the paragraphs indicated below with following text. No New Matter is being added in this amendment.

Please amend the paragraph found on page 1, lines 5-10 as follows:

a1 --- The instant application is related to two concurrently assigned and concurrently filed U.S. Patent Applications, PERFORMANCE MARKERS TO MEASURE PERFORMANCE OF FEATURES IN A PROGRAM, Serial No. 09/606,961, filed June 29, 2000, (Attorney Docket M&G 40062.69-US-01) and PERFORMANCE MARKERS TO MEASURE BENCHMARK TIMING OF A PLURALITY OF FEATURES IN AN APPLICATION PROGRAM, Serial No. 09/606,896, filed June 29, 2000, (Attorney Docket No. 40062.69-US-03). ---

Please also amend the paragraph found at page 17, line 15 through page 18, line 2 as follows:

a2 -- Once all the processing has been completed, the unInit module 403 is called using unInit call 413. This module 403 also checks to determine if the Init module 401 has indicated that benchmark processing is to occur. If this benchmark processing is not to occur, the linked unInit module 403 simply returns to the application program 101. If the benchmark processing is to occur, the linked uninit module 403 calls the corresponding unInit DLL module 423. The unInit DLL 423 module retrieves all of the benchmark data records from the memory block 424, formats them appropriately, and stores these records within the mass storage device 111. Once
